Application/Control Number: 09/423,523

Art Unit: 1711

1. The request filed on April 30, 2002 for a Continued Prosecution Application (CPA) under 37 CFR 1.53(d) based on parent Application No. 09/423,523 is acceptable and a CPA has been established. An action on the CPA follows.

2. Claims 5-10 and 12-14 are rejected under 35 U.S.C. 112, second paragraph, as being

2. Claims 5-10 and 12-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Within claims 5-10, the language, "the polymer containing polyether chains", lacks antecedent basis. Furthermore, the subject matter of the claims does not appear to be relevant to the independent claim as amended.

The subject matter of claim 10 fails to further limit claim 4.

Claims 12-14 improperly depend from canceled claim 11.

Based upon the disclosure within page 2, it is questioned if applicants intended to recite "polyoxyethylene", rather than "polyoxyalkylene" within line 2 of claim 7.

3. Claims 4-9 and 15 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is unclear if applicants' polymers may be polyethers lacking other structural or linking segments. For example, it is unclear if high molecular weight, exclusively polyether polymers can be used. Claims 7-9 seem to suggest that polymers containing only polyether

Page 3

Application/Control Number: 09/423,523

Art Unit: 1711

segments may be used; however, applicants' disclosure at page 2 indicates that the polyoxyalkylene chains are linked via other polymer chains or "connecting regions".

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 4-10 and 12-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Flesher ('024) or Werenicz et al. ('887) or WO 96/15174, each in view of Pia ('951).

The primary references disclose the production of water vapor permeable films, but are silent regarding the use of the films as covers for compost heaps. As discussed within applicants' Background of the Invention, the use of covers over compost heaps to prevent undue interference

Application/Control Number: 09/423,523

Art Unit: 1711

from weather conditions has long been known. Furthermore, Pia discloses that the covers over

compost (used to spawn mushrooms) can be tailored or modified to control such conditions as oxygen, carbon dioxide, and water contents or exchange rates. Therefore, in view of the art recognized need to both protect compost piles from the elements and to control the environment of the compost, the position is taken that it would have been obvious to utilize gas permeable films, such as those disclosed by the primary references, as protecting covers for compost heaps.

6. Applicants' arguments have been considered; however, the position is taken that the teachings of the references in combination with the known state of the art would have rendered the use of permeable films to protect compost heaps obvious.

Any inquiry concerning this communication should be directed to R. Sergent at telephone number (703) 308-2982.
